PROJECTS

Intruder Detection System

Developed a model that enhances physical security across protected zones through various mechanisms such as patrolling, CCTV monitoring, and electronic alarm systems.

Classified detection systems based on the area of intrusion (point, boundary, area detection) leading to improved incident response time.

Phishing URL Detection

Researched and implemented a system for identifying phishing URLs using machine learning techniques.

Utilized algorithms including K-Nearest Neighbors, Decision Tree, Random Forest, Support Vector Machine, and LightGBM.

Conducted performance comparisons based on accuracy, false positives, and false negatives; successfully determined the most effective method for phishing detection.
